

Southport Rigging

Lets Go Windsurfing!
2009

What is Southport Rigging?

Windsurfers

First and foremost, we're windsurfers. From long boards to wave boards, light air to gale, one of us has been there. Expect us to be out sailing with you and teaching: beginners, jibes, waterstarts, and in the store, helping you to rig and get the most out of your gear.

Reliable

We stock the items in this catalog and more. We ship same day in most cases, and shipments arrive to most addresses within 3 to 5 business days.

Experience

For over 26 years, we have fit windsurfers and boards of all sizes for all conditions. We have what you need.

More than a Catalog Retailer

www.southport-rigging.com expands what we offer in this print catalog. The website is updated daily with the latest new gear, specials and a wealth of information. It is your best online source. **Bookmark it!**

2009 Pricing Program

Our website and catalog show manufacturers suggested retail prices (msrp) for all 2009 products. Web and catalog offers may differ from those available thru our phone sales staff or in the store.

Windsurfing

Windsurfing was born almost 40 years ago from humble beginnings, a triangular sail attached to a long surfboard. The sport has evolved in many ways, and in many directions. Modern windsurfing retains the simple beauty of gliding across the water, powered only by the breeze, but now offers once unimagined options including wave riding, freestyle, racing, jumping, and long distance cruising.

Windsurfing is an Olympic event, and has spawned sister sports like kiteboarding and tow-in surfing. The latest incarnation of stand-up paddling combines traditional Hawaiian boarding with modern windsurfer technology. There are more ways than ever to have fun on the water, and we'll help you enjoy them.

You don't need special conditions, or super-human strength to windsurf. Most any body of water with a bit of breeze is enough, and most anyone who can swim and stand up can do it. We have equipment for all sizes, ages, and skill levels.

We hope you'll join the fun. Remember: wind is free.

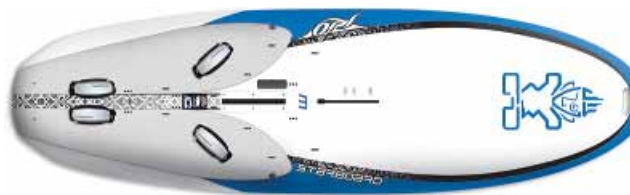

JP Funster \$1095

Beginner friendly, yet stylish, the Funster covers a huge range of use. There are three sizes to accommodate many riders weights and sail sizes.

Vol	L	W
160	258	80
180	258	91
205	260	101

Fun boards are great for learning the basics, and perfect for all around use in lighter winds. Width provides stability for beginners, but also promotes performance on a plane. Daggerboards assist upwind sailing. These boards are not race winners, but are fun to sail in many conditions and for all abilities.

Starboard Rio \$1099

Versatile, and very smooth from displacement to plane, the Rio handles a huge range of sails, riders, and water conditions. Durable construction & well outfitted.

Size	Vol	L	W	range
S	175	269	76	1.5 - 9.0
M	195	275	81	1.7 - 9.5
L	215	290	85	2.0 - 10

RRD Easy Ride \$1049

Beginner to advanced, this fun board is ideal for kids and smaller adults who want a platform that is beginner friendly but geared toward quick progression.

Vol	L	W
180	260	85

Bic Nova \$999

With decades as the world's leading sailboard maker, Bic has perfected the family board. These are so easy to ride, yet so fun. The 240 is a light wind cruiser, the 210 an all-around, the 170 a sporty choice for lighter weight riders.

Vol	L	W
170	239	90
210	265	95
240	308	82

Rigs: the force that powers your ride

The rig is the windsurfer's engine. Consisting of a sail, a mast that supports it vertically, a boom which is both horizontal support and handle, base extension to adjust the mast length, and the base which connects the rig to the board and permits it to pivot on a universal joint. There are many brands and models of each part, with different features and quality. For beginners the most important issues are the size of the sail, which must be big enough to get you going, but not overpowering, and the mast, which should be two-piece for easy transportation, and have at least some carbon to reduce weight and ensure proper bend. Lighter feels better, but costs more.

Chinook Junior Glide Rig \$355

Perfect for the youngsters! Each package includes two sail sizes, a lightweight aluminum two-piece mast, base & foot, clamp-on small grip boom, uphaul and a carry bag.

1.0 & 1.5 Rig The smaller size is right for average sized 5 to 8 year olds.

2.0 & 2.5 Rig This works great for typical 9 to 11 year olds.

Chinook Power Glide Rig

In the past many value priced rigs suffered from lower quality hardware. No worries here! Chinook has a well earned reputation for functionality and strength, so you know this kit is solid. The Package includes an X-Ply reinforced Ezzy built sail, 2 piece epoxy mast, Aluminum mast extension, 1 bolt tendon base, uphaul, and Competition boom.

Sail	Ext	Boom	Mast	Price
4.0	Short	129-191	400	604
4.7	Med.	154-214	400	616
5.5	Med.	154-214	430	649
6.5	Med.	154-214	460	702
7.5	Tall	182-244	460	726

Severne Synergy Rig

Severne has made rigging easier than ever before with the Synergy. The sail is light and user friendly. The rig parts are color coded, so there's no need to measure.

All the sails rig on the same 430cm two piece mast & adjustable 170-220 boom, so you can double your range by adding a second sail. Rig includes sail, boom, mast, base, extension, uphaul, and bag.

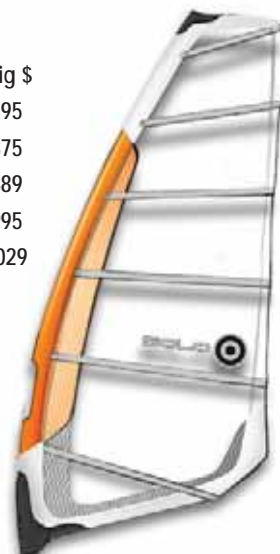

Size	Rig	Sail only
4.8	\$699	\$329
5.4	\$739	\$359
6.0	\$749	\$375
6.7	\$775	\$389

Neil Pryde Solo

Size	Luff	Boom	Mast	Price	Rig \$
5.0	414	173	400	480	795
5.5	434	180	430	504	875
6.0	453	187	430	520	889
6.5	469	197	460	533	995
7.5	502	211	490	560	1029

Very lightweight and simple to rig, great for beginners and intermediates who want super easy handling. Rig includes sail, X3 mast and boom, Chinook extension/ base, and an uphaul.

Put one of these rigs on a board from page 3 and you have a great start in windsurfing for a low price.

Starboard Futura

The Futura is easy to gybe and smooth in rough water, with excellent top speed. Fast, fun, and maneuverable.

Vol	L	W	range*	
101	240	65	4.5 - 6.5	\$1549 Technora
111	240	68	5.0 - 8.0	\$1789 Wood
122	244	72	5.5 - 9.0	
133	247	77	6.0 - 9.5	
144	246	79	6.5 - 10	
155	249	85	7.0 - 10.0	

JP X-Cite Ride

This board excels for progression. The shape is very forgiving and smooth in the turns, but still has a lively feel. The three construction options offer ascending performance & lighter weights.

Vol	L	W	Range	
110	246	65	5.2 - 7.2	\$1533 ES
120	250	68	5.5 - 8.0	\$1807 FWS
130	250	70	6.0 - 8.5	\$2123 PRO
145	252	74	6.4 - 9.5	
160	254	78	7.0+	

Starboard GO

The same great shapes as the Futura, but in a tougher, lower cost construction. They weigh a little more, but still ride very well.

Vol	L	W	range*	
111	240	68	5.0 - 8.0	\$1249 AST
122	244	72	5.5 - 9.0	
133	247	77	6.0 - 9.5	
144	246	79	6.5 - 10	
155	249	85	7.0 - 10.0	\$1399 AST
175			7.5+	with EVA pad

Which board is right for you? First, pick your sailing style.

Freeride boards are what most intermediate to advanced sailors enjoy for all-around use. Fast enough, easy to turn, and comfortable to ride even in choppy water. If you are working on gybes or footstraps, the boards on this page will help you get there. If you are already proficient, but don't want a specialized, single-use board, you'll have fun on any of them.

Freestyle wave boards are for medium & higher wind use in a variety of conditions. Some are geared more for freestyle tricks, some for onshore wave riding, and others for bump & jump in chop or Gorge conditions, but all have some balance of speed, turning, and rough water control.

Freestyle boards are a must for new-school tricks, but also very maneuverable and fun to ride. They plane and accelerate quickly for their volume, but they are not lightwind boards by mainland standards. Top speed and upwind performance are somewhat limited.

RRD X-Ride

This easy turning freeride is quick to plane and motors upwind. It's accessible, but has a fast feel. The fin and foot straps are first-rate, and the build is solid.

Vol	L	W	Range	
110				\$1499
120	252	67	5.2 - 7.5	
135	254	70	6.0 - 8.5	
145	256	73	6.5 - 9.0	
155	258	76	7.0 - 9.3	

JP FreeStyle Wave

A decade ago JP started the crossover trend with the first Freestyle Wave. The shapes have evolved to remain the most versatile high wind boards.

Vol	L	W	Range	
77	238	55	4.0 - 5.2	
84	238	57	4.4 - 6.0	
92	240	59	4.7 - 6.2	\$1890 FWS
101	246	62	5.0 - 6.5	\$2123 Pro
107	248	64	5.4 - 6.9	

RRD FreeStyle Wave

Crossover boards with a very surfy feel, these are fast enough for bump & jump, and plane well, but still surf down-the-line. Premium fin & footstraps included.

Vol	L	W	Range	
80	236	56	4.0 - 5.6	\$1649 X-Tech
85	237	57	4.2 - 5.8	\$1899 LTD

5.8	382-83	154-58	370	629
6.3	382-83	154-58	370	649

Wave Sails

Wave sails come in several sub-categories, depending on the intended use. Many are fine all-around high wind sails for small waves or bump & jump use. Some are dedicated surf sails, ideal for down-the-line, big wave riding, but limited for anything else. On-shore or "euro wave" sails have better speed and upwind ability. "Power wave" have more acceleration, good for fluky winds, or busting through shore-break. Consider your prevalent conditions. Buying a Maui style sail to use in a duck pond is inefficient, but using a flimsy freeride sail in big surf is a recipe for disaster.

Neil Pryde Firefly

Lightweight but powerful, with smooth handling for freestyle or freeride.

Size	Luff	Boom	Mast	\$

Freeride Sails - the Swiss Army Knife of windsurfing.

These sails are fun to ride in a variety of settings, and are easy to rig and ride. Depending on specific design and construction they may be best suited to one type of use, but can still cross over to others.

More maneuverable than race sails, faster than wave, they rotate easily and still have good for pointing and wind range. The softer, more durable designs can double as light wind wave sails. The stiffer, more stable ones can be competitive in slalom. Most work well for freestyle too.

Neil Pryde Hellcat

A Camless rocket for flat-water blasting & chop-hopping. Light, with a wide wind range.

Fins - fine tune your ride!

Next to the sail, the fin is perhaps the most dynamic and important component in a windsurfing kit, yet seldom given much consideration by many windsurfers. Even the best board can't perform to full potential without a quality fin. To get the full range from your favorite stick, try changing fins for different conditions. If there are weeds or grass in the water, a weed fin is must-have. For upwind speed, a stiffer straighter blade is advantageous. For control in rough water, or improved handling on a wave, try a slightly softer, more swept back fin. Special events like racing or freestyle call for special fin designs. In general bigger riders, bigger boards, and bigger sails require bigger fins. Feel free to call or e-mail us for specific recommendations.

Tangent dynamics

fins for the new order of boards

The Drive is a shallow water fin that is quick to plane and points very well. The larger models are optimized for the latest generation of "wide style" boards. Smaller sizes the emphasis is on power and control; also good for freestyle because of their quick acceleration.

Drive - Pointer - Core G-10

size	range	price
#3	5.0 - 6.5	\$99
#4	5.3 - 7.0	\$105

XX	7.0 - 9.5	\$119
XXX	8.0 - 11.5	\$125

The Reaper is a blend of speed, power, and pointing that rejects most weeds, but feels "normal", even on high performance hulls. The progressive rake and forward offset keeps the center of lateral resistance where you need it to plane and blast upwind. Smooth even at ballistic speeds.

Masts are the backbone of a windsurfing rig. Getting the right length and stiffness is critical to achieving the best performance from your sail. Masts with a higher percentage of carbon are lighter, which improves handling and reduces fatigue. High carbon masts also respond quicker to changing wind.

If you are going out in surf conditions, you'll need a wave-rated mast. Reduced diameter "skinny" masts are especially durable, but only work well with certain sails. Usually larger sails require standard diameter.

Cambered sails, especially race sails, may need a specific bend curve and taper. It is best to follow the sail makers' advice on compatibility. Feel free to call or e-mail us with questions or for specific recommendations.

DVD and Books

When you can't be on the water, you can still feed the stoke and learn new moves. This is just a sample of the many titles in stock. Surf, kite, skate, and snowboard titles as well!

Harnesses and harness Lines: necessary equipment for powered sailing.

We are often asked "when should I use a harness?" and "what is best, a seat or waist harness?" *Seat or Waist?..* is mostly a matter of preference, but generally better sailors on small maneuver oriented boards prefer a waist harness and racing sailors and big board sailors with big sails prefer a seat harness. *When should I use a Harness?* A harness is an important part of getting your board planing and going fast enough to get into the footstraps. When you have mastered basic sail handling you are ready to start using a harness to put your weight into the rig and start using big enough sails to plane with. You'll go faster, sail longer, and have more fun when you ride with with a harness.

A little wetsuit common sense to keep you warm and extend your season!

We do most of our sailing in Wisconsin where the best winds are usually in the cooler temperatures of the spring and fall. Wherever you sail there are probably times when you need the protection of the right amount of neoprene to stay comfortable and warm while out on the water.

What is the right amount of Neoprene?

It depends on the temperature of the air and water you are going to sail in.

"We use the 100 degree rule. Generally if the Air and the Water temperature add up to 100+ degrees a 5/3 Steamer should be warm enough."

This may vary plus or minus 5 degrees depending on your metabolism. If you want to sail in cooler temperatures than 100 degrees you need a drysuit or you will want to add thermal layering with a thermo shirt or shorts. We like the design of Steamers because you can get in and out of these suits by yourself. A friend is required to help zip and unzip the horizontal zippers on drysuits.

Just like snow skiing, If your feet get cold put on a hat. When the air or water temperature go below 65 degrees, your body can no longer generate enough heat to keep your core warm without insulation. Your body is wired to keep your brain warm even at the expense of your feet or hands going numb. So put on a hood or hat and your body won't waste valuable energy keeping your brain warm and there will be extra heat to circulate warm blood to your hands and feet.

Windsurf suits are designed for above the water as opposed to scuba suits that are designed for underwater. Windsurfing suits minimize forearm fatigue with oversized forearm areas. The typical suits are designed with multiple thickness neoprene to give warmth and flexibility where needed. Smooth skin sheds water quickly to minimize the cooling effect of water evaporating off the suit. Most of the suit is black to absorb the sun's heat.

In Wisconsin it is cold 5/3 Steamer weather until it is almost too warm for even a Shorty wetsuit, so we think of 4/3 Steamers and 3/3 Long legged convertible suits as luxury items. Where you sail it might be just right for these suits. It is always a good idea to check with the old salts to see what they use at your favorite sailing venue.

RRD 11' SUP \$1499

A smooth paddling SUP with a padded deck, cool graphics, and a carbon paddle included for excellent value and performance. It also sails very well, thanks to a stable shape and well-placed mast insert.

Length : 11' Width: 31" Thickness: 4.5"

Neil Pryde

Hi-Hook Vest \$ 84

A floatation vest that fits with most harnesses. Coast Guard approved. Good for kite, windsurf & SUP

Ride Safe!

RRD Longrider \$1525

This Hybrid longboard is fun to sail on or off a plane. It can be paddled, making it skunk-proof. Includes full padded deck, high quality fin & foot straps. The daggerboard works smoothly and promotes good upwind speed.

Length : 340
Width : 70
Volume : 180

Standup Paddle - Catch the latest wave in water sports!

These standup paddle boards can be paddled on flat water, surf waves, and sail. Paddling is fun and a great workout. In waves, you have greater speed and range than traditional surfboards, so you catch more waves. Add a windsurf rig and you have a simple, smooth riding longboard, wonderful for cruising and light wind freestyle. We offer a wide variety of boards, paddles, and accessories. Please call or e-mail for recommendations or more information.

Aquaglide Amundson SUP 11'3"

A versatile shape for the first time paddler, as well as more experienced riders in flat-water or surf.

Sturdy, with a Duratec bottom sheet, and an integrated EVA deck pad so there's no need to wax.

There's a mid-deck box to attach a windsurf rig, and it sails well too.

Length: 11'3"
Width: 29 1/2" **\$999**

Amundson Impact Rig \$499.95

These light weight rigs have a soft, but lively feel that works well for longboards & SUP sailing.

Rig includes 6.5m sail, 2-pc 430cm mast, clamp-on boom, base & extension .

Bic Jungle \$1099.95

Excellent surfing with or without a paddle or sail.

This is one of the most durable and best carving SUP boards.

You can add footstraps for sail, or a kayak seat for sit-down use.

Length : 330.0 cm.
Width : 72.0 cm.
Volume : 175 l.
Weight : 11.8 kg.

Starboard SUPs

Starboard, a world leader in windsurfing, has taken bold steps in SUP innovation, with great variety of fresh shapes and constructions.

Volume : 206 l. **sail!**

Stand Up Paddles

A good paddle is essential for successful stand up paddling. Light weight, durability, proper size and blade angle are important considerations. Shaft length should be about 10 to 15cm less than your height.

Starboard

Alloy kids **\$65**
Power PP **\$125**
Carbon **\$299**

The fixed length paddles can be cut to custom sizes.

Powerex

Carbon 85" (cut) **\$349**

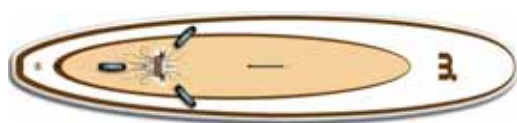

NorthShore

Glass / Carbon **\$199**

Mistral Pacifico \$1179

The Pacifico is an easy stand up paddle board, as well as a fun longboard for light wind windsurfing. The EVA deck is very comfortable, and the shape invites old-school freestyle moves, and play on small waves. Glide is very good. Not recommended for beginning windsurfers, as there is no center-board, and width is only 78cm, but intermediates and up will have a great time with it.

Length : 350 cm.
Width : 78.0 cm.
Volume : 207 l.
Weight : 12.9 kg.

Start Kiteboarding

Kiteboarding, also called kite surfing, is an exciting sport. It is not hard to learn, but requires good instruction and practice.

The best way to get started is to buy a trainer kite and instructional DVD. Watch the video to help visualize kite control, then practice using the trainer until you can "fly blind" by steering the kite wherever you want it without the need to look at the kite or control bar.

Once you master the small kite, you are ready for a lesson on a full sized kite. Be sure your instructor is a professional with IKO and / or PASA certification.

You will fly the big kite on land first, learning to control its considerable power, then move to the water for body drags and water launch practice.

When you are comfortable with power management, launching and landing, and can drag in both directions at-will, you can strap on a board and have some serious fun!

Most riders need about 5 to 10 hours of land practice with a trainer, and 5 to 10 hours of instruction to get the basics, but it is different for everyone. The better you are at flying the trainer, the quicker you'll make friends with the big kites, so practice practice practice.

Call or e-mail us for more information about kite lessons and equipment.

Cabhinha Convert

A great all around kite that works well for all styles and abilities. The easy handling and quick re-launch are a plus for beginners, while immediate de-power provides huge range.

Cabrinha Caliber \$699.

with great speed & tracking, this board can take your freestyle & freeride as far as you dare. The wide tips & low rocker make it quick to plane too. Includes fins & the new backless Sync binding system.

Sizes 127x38, 130x40, 133x41, 136x42

Cabrinha Prodigy \$599

This all around shape is perfect for beginners, light wind, and most kinds of free riding. The paulownia core gives great durability, perfect flex, and a smooth ride. The outline and rocker help you stay upwind. Includes fins & the new backless Sync binding system.

Sizes 138x41, 148x43, 158x44.

Lightwave Wing Lite Wind \$679

The radical side cut of this board is borrowed from snowboard designs, and gives amazing grip and pop. With plenty of width and a low rocker it is very quick to plane and efficient up wind. The controlled flex makes the ride smooth and forgiving, so it works for all abilities. The Mack Daddy foot system is included.

Sizes 146x44, 153x44, 161x44

Lightwave Vision \$649

A super strong compression molded board that can carve radically and jump huge! This proven freestyle shape can take you as far as you want to go. Great for wake style riding. The Mack Daddy foot system is included.

Sizes
132x40
137x44
144x47

Lightwave Spirit \$649

This freestyle board is incredibly high performance, yet accessible. The wood core gives it strength, light weight and mad pop, while selective flex and thin rails maintain control and grip. Rip with confidence. Savor the silky ride and eye-catching graphics. The Mack Daddy foot system is included.

Slingshot B kites

Learn to kite the right way

This is the easy way to learn to handle a kite. You can get your flying skills dialed without risking an expensive inflatable. The larger B kites also work well as snow kites. Complete with bar, lines, and bag. The B2 includes an instructional DVD.

B2 \$119

B3 \$219

B4 \$399

B6 \$499

NSI Reinforced Reel Leash \$69.95

Leash webbing stays coiled out of the way in the housing and won't drag in the water or get caught. The 2" heavy duty loop of webbing attaches to any harness strap, eliminating then need for harness modification.

Still the best alternative for a board leash and now even more durable to address the strong angular pulls and drags of beginners, thanks to a stronger base plate and stainless steel eye bolts.

Pro Tec Helmets

High density injection molded shell with full surround, dual density EVA interior covering the inside. The Wake adds removable cupping ear guards and rear head lock fit for better comfort and fit.

Wake \$63.95

Water \$41.95
